

06/06/2021 (15:00 GMT+2 – 16:00 GMT +2)

Meeting TT-TDCF / ET-DRC : DAYCLI message

TT-TDCF : Task Team on Table Data Code Format

List of participants

TT-TDCF: Jitsuko HASEGAWA, Sergio Henrique Soares FERREIRA

ET-DRC: Christina Lief, Ge Peng, Urip Haryoko, Reinaldo Silveira, Markus Ziese, José A. Guijarro, William Wright, Denis STUBER

Remarks from TT-TDCF

Code table finalization is planned for the 29 of June 2021.

The new Code table for the Data Quality Control information is based on 256 possibilities.

Météo-France and Brazil (Reinaldo) will send sample data to Sergio.

Remarks from ET-DRC

William

Suspect data is representative of a high and medium confidence.

Doubful of a low confidence. Only suspect data is supposed to be exchanged through the DAYCLI message.

José

Data modified should have a different code than good (code 0 checked and declared good).

Denis, DAYCLI should be kept simple.

William, I would see the DayCli message as a simplified version of a likely more complex QC flagging system. So starting off simply is a good balance between making the quality information too simple, versus too complex.

Peer (by mail), "Keep it as simple as possible! The solution needs to be robust enough for implementation in 193 countries/territories (theoretically)."

Reinaldo

For some NMHS, the code table will be difficult to implement.

Denis, ET-DRC shall work (a lot) on a DAYCLI user manual

Conclusions

- Denis will send the new version of the document on DAYCLI message at the end of this week (before Friday 11 of June)
- ET-DRC will review the document before the 25 June 2021
- Next meeting is planned the 28 of June 2021 14:00-16:00 Geneva time
