

Meeting ET-DRC : DAYCLI message - 28/06/2021 (14:00 GMT+2 – 16:00 GMT +2)

List of participants

ET-DRC: Christina Lief, Ali Eddenjal, Ge Peng, Urip Haryoko, Reinaldo Silveira, Markus Ziese, José A. Guijarro, William Wright, Denis Stuber

News

TT-TDCF and ET-DRC agreed to take some more time to validate the sequence of the new DAYCLI BUFR sequence with a wider variety of samples. The most important feature of this new sequence is that this accommodates to represent different time slots for each parameter and that needs to cover many practices used all over the world.

As a result, need to wait another 6 months to approve the new sequence.

So far, tests has been made by data from USA, Brazil and France.

See : <https://github.com/wmo-im/BUFR4/issues/51>, and <https://github.com/wmo-im/cct/wiki/Meetings>

Action 1 : Periods of measurement

Need to have more examples and especially from:

Country	In charge	
Australia	William	
Indonesia	Urip	
Germania	Markus	
India	Via Denis	
Luxembourg	Via Denis	
USA	Via Denis	
Spain	Jose	
Libya	Ali	
Brazil	Reinaldo	
France	Via Denis	

Each country will give the practice in place according the model given by Denis.

Markus will give some national practices on the definition of the climatological hour in use. E.g.

- Luxembourg, from the Hour H-1 at 45 minutes to the Hour H at 46 minutes,
- Germany, from the Hour H-1 at 49 minutes to the Hour H at 50 minutes.

Action 2

CODE TABLE 0-08-094

0-08-094 Method used to calculate the average daily temperature

Add to this table the possibility of “another method not known”
